Dear Felix:

Thank you for your letter.

I had not given any thought to attending, but I am doubtful that I will be able to. However, if you do arrange a symposium I hope you can consider inviting Dr. Nozaki with whom I worked in Melbourne and who comes here August 26. I think it might be pertinent also to have either Ed Lemox from Urbana or Mel Cohn (Biochemistry here) who have worked on the cellular production of Ab with somewhat different results.

I would not preclude my own attendance at the Academy meeting but can use our own funds for travel if I can come.

With best regards

J. Lederberg

P.S. - You didn't say what you thought about elective antibody formation - or do you prefer to "hold your fire" until the symposium!
